

## **UNDERGROUND** kiteboards 2009

The UNDERGROUND board range 2009 has grown. We now supply five different board types: FLX, FUTURE, STEEZE, ZEPHYR and FREEWAVE and there are more to come.

We aim for the best in quality and performance to provide the perfect board for every rider.

Whether you are just learning to ride or ripping in worldcup freestyle competitions, cruising in light winds or boosting big in storms, enjoying small waves or charging barrels – the 2009 Underground board range has the tool for you to have a great time.

To complete the package the R&D team has designed a great new range of board accessories.

There are new CNC shaped G10 fins suiting each board line, a new grab handle and the new top of the line pad/strap system, featuring a new generation of comfortable, user friendly, high performance kiteboarding pads/straps.

# FLX

In 2009 the legendary FLX remains the high-end freestyle and competition board.

It features the proven QUADconcave bottom shape, a strong and eco-friendly Paulownia WOODcore and a CARBON reinforced and flex tuned BIAXglass laminate.

The new thickness flow creates thinner tips that provide exceptional flex control by using defined unicarbon reinforcements while the new bat-wing tips and rail shape offer a smoother ride with supreme edge-control.

The five available sizes have been refined carefully to provide the perfect board for the special needs of any freestyle riders pushing the limits.

This year there are two graphic ranges.

The Euro Ink graphics lead modern board design into the future.

The Legends graphics are based on South Pacific mythology, and tell the stories of island magic on the deck of each board.

Choose a tool and show your moves.

124x37, 128x38, 132x39, 135x41, 138x43

# FUTURE

Another new toy in the 2009 Underground board range is the FUTURE.

This range is for the freerider, looking for a board that is just easy and fun to ride. You might be learning, or riding waves or even doing tricks and jumps - this board can do it all, and will push you to the next level while having a lot of fun.

All this combined with an affordable price, will make it a popular board.

134x40, 141x42, 146x44

# ZEPHYR

The ZEPHYR is a specialist light wind board.

The design gives excellent low wind performance while retaining good freestyle potential. The same construction has been used as for the FLX, in combination with an early planing, single concave bottom shape and a relatively short but super-wide outline. Like the FLX the ZEPHYR is available in the two graphic styles. Modern Euro Ink graphics and Greek Legends graphics. Don't limit yourself to cruising when it's light.

138x44, 144x46

### STEEZE

The STEEZE is a brand new, dedicated wakestyle board.

Both board sizes provide three super-wide, wakeboard-binding stance options, and two strap stance options. They have the rocker, length and width you need to load the board and throw those wakestyle moves with power and style.

The QUADconcave bottom shape has flat sections at the rails and between all concaves. These give the rider the great control in the water, and increased durability.

The board is offered complete or deck with fins only to use it with wakeboard-bindings. Add some style and make it look easy.

133x42, 139x43

### FREEWAVE

The genius FREEWAVE concept is unique to Underground. There are now four great wavebord sizes and the boards have a softer flex, a recessed deck and are very tough. The full deck pad with a tail kick makes them a pleasure to jibe and ride strapless.

The FREEWAVE will be amazing fun in perfectly clean waves and epic in those not so good wave conditions, which most of us are used to. It doubles as a great flat water freestyle board for those light wind days.

Small (approx 5'4") squash-tail thruster Medium (approx 5'8") squash-tail thruster Large (approx 6'2") squash-tail thruster 5'10" fish, fish-tail twin

#### NEW pad/strap system 2009

The R&D brief was simple but hard to achieve: design the best pad/strap system on the market. Research clearly showed that we needed to come up with something completely different and develop

new technology.

The result is the new top of the line system which offers a new generation of comfortable, user friendly, high perfromance pad/strap design.

#### **Underground Fins – 2009**

All Underground fins will be CNC shaped G10 for precision, consistency and durability. The base curve of the FLX, Future, Zephyr and Steeze fins are designed to match each board range, and so are not interchangeable.

FLX & Future are supplied standard with 50mm fins. We have a 40 mm option as well.

Zephyr boards are supplied with 45mm fins.

Steeze are supplied with 30mm fins.

Freewave boards have Future fin boxes and are supplied with fins.

### **Grab Handle**

All new super stylish very comfortable!
